VACANCY ANNOUNCEMENT

**Position: Sr. Network Engineer
(Network Infrastructure)**

House-17, Road-04, Block-F
Banani, Dhaka-1213 | info@dizitbd.com | +880 1894 928 004 | www.dizitbd.com

Position: Sr. Network Engineer (Network Infrastructure)

Job Posting Date: 24/11/2021

Job Closing Date: 10/12/2021

Job Descriptions:

The primary purpose of this role is to understand requirements, conduct and oversee IT & ITES projects that are medium to large in size by applying cross-functional expertise in IT Infrastructure. The Solutions Manager will direct and coordinate the use of resources across different stages of projects to reach targets. This includes planning, development, execution, and implementation stages while adhering to enterprise project practices and compliance with budget and requirements. Overall, this role requires communication with stakeholders during all phases and delivering its efficient completion.

Ideal candidates should have experience in designing, planning, business analysis and the ability to communicate with stakeholders during all phases of the project and deliver its efficient completion.

Duties and Responsibilities:

- Lead and deliver multiple infrastructure projects that are moderately complex from planning to realization with full responsibility and accountability for the business.
- Ensure the safety and integrity of the data network and all LAN/WAN connected devices
- Create and maintain a vulnerability and version control process across all appliances on the network
- Participate in an on-call rotation to support the business during network outages (7x24)

- Provide timely feedback and develop advanced methods to improve the group's SLA
- Plan implementation of medium-large sized projects to solve technical issues or implement new services on tight timetables
- Work with PMO and business stakeholders to identify project requirements and timelines as it pertains to the network infrastructure
- Design, test and inspect all networks and their components with careful consideration relating to capacity and vulnerabilities
- Research, design and deliver professional proposals while creating supporting documentation and diagrams to support proposed topologies.
- Co-ordinate the work for complex and large project teams by recommending or requesting resources to support project demands, communicate a clear vision of business project goals and objectives and provide functional expertise input for deliverables worked on by the team.
- Manage the alignment, buy-in, and support of diverse project stakeholders by building and maintaining relationships with internal customers, third-party vendors, and senior management.
- Manage designated work streams and constituents to meet customer and business needs by translating business plans into tactical action items and providing training and development opportunities for project managers.
- Responsible for tracking and reporting on key metrics (i.e. deliverables, financials, duration, benefits) and communicating findings to program managers and top management.

Skill Requirements

- Minimum Bachelor's Degree
- At least 5 years' experience, including 3+ years managing a team.
- 2-3 years' experience to identify, analyze, and communicate requirements and results; ability to communicate effectively.
- Thorough domain knowledge and experience
- Minimum of 5 years' experience in a professional information technology environment with exposure to network and security engineering
- Minimum of 5 years related experience supporting LAN/WAN environment.
- 5 years related experience with telecom keyed and VoIP/Ucaas systems. Hands on experience with Avaya and other on-prem and cloud solutions
- Strong people skills

Educational Requirements

- Bachelor of Science (BSc) in CSE, CS, IT, TE, EEE, Diploma in Computer in CSE
- Preferred Professional Certification: CCNA, CCNP, Security +, Network+

Salary

- Attractive Salary Package for eligible candidates along with International Training and Other benefits.

Women are encourage to apply.
