Sr. Systems Engineer (Solution Architecture)

Job Posting Date: 24/11/2021

Job Closing Date: 10/12/2021

Job Descriptions:

The primary purpose of this role is to understand requirements, conduct and oversee application development projects that are medium to large in size by applying cross-functional expertise in server virtualizations. This includes planning, development, execution, and implementation stages while adhering to enterprise project practices and compliance with budget and requirements. Overall, this role requires communication with stakeholders during all phases and delivering its efficient completion.

The Ideal candidates should have experience in computing technologies, business analysis and the ability to communicate with stakeholders during all phases of the project and deliver its efficient completion.

Duties and Responsibilities:

- Lead and deliver multiple projects that are moderately complex from planning to realization with full responsibility and accountability for the business.
- Liaise, direct and coordinate with appropriate stakeholders to deliver the project on time.
- Outlining, defining, and initiating the project.
- Develop, analyze and manage all touch points of the project plan.
- Co-ordinate the work for complex and large project teams by recommending or requesting resources to support project demands, communicate a clear vision of business project goals and objectives and provide functional expertise input for deliverables worked on by the team.

- Implement document control policies and documentation templates.
- Control and mitigate project risks by performing the qualitative and quantitative analysis of risks and trigger events, planning risk response, establishing contingency plans, anticipating dependencies affected by ongoing project changes, and recommending ways to mitigate future risks to management.
- Manage designated work streams and constituents to meet customer and business needs by translating business plans into tactical action items and providing training and development opportunities for project managers.
- Responsible for tracking and reporting on key metrics (i.e. deliverables, financials, duration, benefits) and communicating findings to program managers and top management.

Skill Requirements

- At least 5 years' experience in web application development, including 3+ years managing a team.
- Thorough domain knowledge and experience in IT & ITES.
- A proficient understanding of pre-sales engineering and sales processes to include critical account management with the resourcefulness to support troubleshooting of sophisticated problems.
- Proven interpersonal skills with the ability to correspond with a broad array of partners including internal groups, sales, and customers at a senior level.
- Experience articulating and presenting to a wide variety of audiences with varying technical capabilities
- The applicants must have experience in the following area(s): Internet Service Provider/ Network Administration/ System Administration/ Network Engineer
- Thorough understanding of project management fundamentals.
- 2-3 years' experience to identify, analyze, and communicate requirements and results; ability to communicate effectively.
- Strong client interface skills and the ability to work well on a time limit.
- Strong people skills

Educational Requirements

- Bachelor of Science (BSc) in CSE, CS, IT, TE, EEE, Diploma in Computer in CSE
- A professional networking industry certification such as CCNP, BCNP, JNCIA, PCNSE, Aruba, RUCKUS, CWNA, CWNP.

Salary

- Attractive Salary Package for eligible candidates along with International Training and Other benefits.

Women are encourage to apply.
